

ProScript achieves Electronic Prescription Service Compliance

ProScript V2.59, the Windows™ based dispensary management solution from Rx Systems, has passed 'Release 1' compliance for the Electronic Prescription Service, (EPS). The system will be installed in a Rowlands pharmacy for live testing by the end of the March. Further live sites will be installed into other Pharmacy sites in April.

"We feel our customers are in a good position to move forward to 'Release 1' and to face the challenges of EPS. All our customers have Windows XP as the standard operating system and the majority use Secure Pharmacy Broadband from NPAnet/NUMARKnet. NPAnet/NUMARKnet has been accredited by CfH and has achieved 'aggregator status' as a means of connecting pharmacy securely to N3", commented Ian Taylor, Sales Director at Rx Systems.

Accreditation is an on-going process and Rx Systems have been mindful to ensure a **fully managed and supported service** given that various releases of EPS are required. Release 1 is about getting the network infrastructure and business flows in place to ensure pharmacy meets the required standards whilst interacting with NHS stakeholders.

Rx Systems will be providing a 'one stop' solution in conjunction with its networking partner NPAnet/NUMARKnet. Rx Systems will manage the end to end solution on behalf of their clients including all hardware, its support, connectivity requirements to N3, software applications and upgrades to meet compliance for EPS 'Release 1'.

Background

ProScript- windows based dispensary management software

NPAnet/NUMARKNET- a secure managed network for community pharmacy
